SUMMARY

DevOps Engineer and Software Engineer with experience designing, deploying, and maintaining production applications and infrastructure. Skilled in CI/CD automation, Docker, Kubernetes, Linux administration, cloud platforms, infrastructure security, and full-stack development. Proven ability to build systems from concept to production, automate operational workflows, and improve reliability, security, and deployment efficiency. Experienced with Python, FastAPI, Next.js, PostgreSQL, GitHub Actions, AWS, Azure, and modern DevOps practices.

TECHNICAL SKILLS

- **Cloud & Infrastructure:** AWS, Azure, Linux, Nginx, Cloudflare, Server Administration, Network Architecture
- **DevOps & Automation:** Docker, Kubernetes, CI/CD, GitHub Actions, Infrastructure Automation, Monitoring, Logging, Secrets Management, Containerization
- **Programming:** Python, TypeScript, JavaScript, SQL
- **Backend:** FastAPI, Node.js, REST APIs, Microservices, Authentication, Authorization, API Security
- **Frontend:** React, Next.js, Tailwind CSS, HTML5, CSS3
- **Databases:** PostgreSQL, MySQL, MongoDB, SQL Server
- **AI & Tools:** OpenAI APIs, LLM Integration, Git, Postman, Jira, VS Code, Figma, Vercel

EXPERIENCE

DevOps Engineer – AI Systems

Mar 2026 – Present

American Circuits Inc. — Charlotte, NC

- Designed and maintained Linux-based production infrastructure supporting internal business-critical applications.
- Built and automated CI/CD pipelines using GitHub Actions, reducing deployment effort and improving release reliability.
- Automated reporting, operational workflows, and integrations using Python and REST APIs, saving multiple hours of manual work weekly.
- Implemented role-based access control, secrets management, and infrastructure security best practices.
- Managed backups, monitoring, system patching, and incident response processes while maintaining 99%+ uptime.
- Collaborated across engineering and operations teams to improve deployment efficiency and platform reliability.

Software Engineer

Jun 2025 – Mar 2026

American Circuits Inc. — Charlotte, NC

- Developed and deployed enterprise applications using Next.js, FastAPI, PostgreSQL, Docker, and Nginx.
- Built production workflow systems supporting engineering, manufacturing, quality control, and management teams.
- Implemented Single Sign-On (SSO), Multi-Factor Authentication (MFA), and secure network architecture using Cloudflare Tunnel.
- Designed scalable backend APIs, database schemas, and deployment architectures.
- Managed application deployments and production support activities.

PROJECTS

Vyne

Product Owner – Live Production

- An AI-native correlation layer built from scratch that ties business events to infrastructure events on a single unified timeline across all connected tools.
- Supports 15+ modules, including chat, projects, docs, voice, and video calls with live transcription, and AI meeting recaps auto-linked to relevant projects and incidents.
- Causal AI engine points at any incident, churn event, or revenue dip and surfaces the deploys, config changes, and customer signals that correlate with it.
- Integrates with GitHub, Sentry, Datadog, HubSpot, Stripe, Linear, and PagerDuty, so that every event flows into a single cross-team timeline without replacing existing workflows.

NEXUS – Traveler Management & Workflow Automation

Project Lead & Product Owner – American Circuits Inc. — Live

- Sole developer from day one, designed the schema, REST API, role hierarchy, and UI in parallel, then drove it through staging to live production and stayed on as the primary maintainer.
- Operators scan QR codes and barcodes to move travelers through the floor; the system enforces step-by-step work-center routing so nothing gets skipped out of sequence.
- Supervisors get a live ops dashboard showing job status, queue depths per work center, operator activity, and QC sign-off tracking, full-floor visibility in real time.
- Role-based access, encrypted API calls, and a fully reconstructible audit history on every action, any traveler can be traced end-to-end for manufacturing compliance and accountability.

Serenity Living

Project Owner – Live Production

- Took the project solo from brief to launch, full UI/UX, backend services, and Vercel deployment, all delivered independently.
- Built a fast, mobile-first frontend with a CMS-friendly content structure; the site has been up without a single engineering incident since it launched.

EDUCATION

B.A. Computer Science — UNC Charlotte, NC,

Jan 2023 – Dec 2025

B.Tech Computer Science (Transfer) — Vellore Institute of Technology, India

Sep 2020 – Dec 2022

CERTIFICATIONS

AWS Solutions Architect — Associate (In Progress)(O'Reilly) | Cisco CCNA Fundamentals (O'Reilly) | SQL for IT Professionals (O'Reilly)
